

Impact of Illegal Immigration in The Schools In Las Cruces, NM

New Mexico Supercomputing Challenge Final Report February 19, 2015

Team Number: 115
Picacho Middle School - Sixth Grade
Las Cruces

Team Members: Yessenia Robledo, Felicity Oropeza,
Juliana Diaz, Delano Davis

Teachers: Mrs.Stout, Mrs.Kindig

Project Mentor: Carl Bogardus, Patty Meyer and Susan
Gibbs

Executive Summary

In the report we are trying to explain how illegal immigration can affect the population in the schools. Our project is focused on the Impact of Illegal Immigration in the schools of the bordering states. As a team we are interested in finding out what is the impact of Illegal immigration. We used a national border patrol website that had the history of illegal immigration and border patrol to collect our data for this project. We did lots of research on the subject which really helped us understand the problem more than we did before.

We are using starlogo to do our coding in this project. In this project we used many different kinds of coding. Starlogo is especially helpful for coding because it is easier for us to understand in the coding project.

Introduction

Our problem is based on Illegal Immigration. Illegal Immigration is the migration of people across national borders in a way that violates the immigration laws of the country. The United States has been dealing with this problem since 1607. The Government has tried Amnesty before and it has failed many times. They have also been denying anymore requests to try amnesty again.

We know that this country is made of Immigrant, but we would like to point out that they make an impact when they migrate to this country. Many immigrants already have a house and driver licences which are either fake or real and we can't risk having non-citizens driving in the streets they can hurt many people and themselves and we can't risk that students we are concerned with the increase of the population and the resources the schools has to come up with. Immigration is a big problem and the government doesn't go to it like a problem. We all know that immigration has been going on for a while and they haven't done anything to stop it.

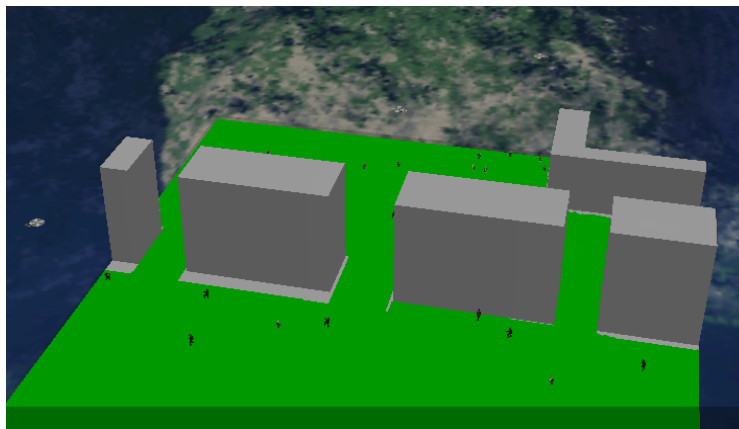

Purpose

Immigration is one of the most important problems today because the U.S cannot support all of the people who cross the border illegally. The government needs to give the more information about immigration. The government needs to take immigration more seriously because immigration is getting worse by the day. Immigration is really bad for the U.S because they're taking up our food and medicine. It is also bad because some kids are coming alone with no parent or guardian. Immigration is getting worse by the minute and we think the border security should step up their game. The Government needs to give the border patrol to work with then maybe they can do more work than they are now.

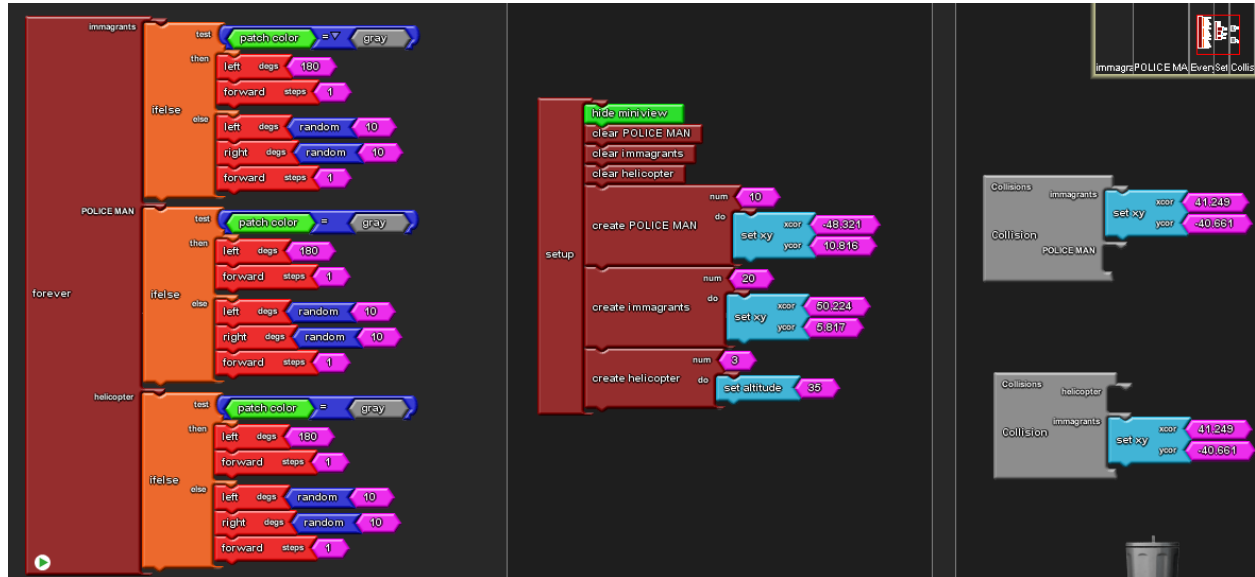

Our team chose this subject because immigration is a big problem in the United States of America. It is also a big topic in the news and it seemed very interesting to us. There are more immigrants where we live because we are close to the bordering states.

Description of the Method used to Solve the problem.

In the model we used starlogo to model our project In the model we represent the real world of illegal immigration and the border patrol on borders in the United States. In the coding we try to represent the real world. In the landscape below, the green is the floor, the gray is a wall and there are people (immigrants, policemen and helicopters). The coding is very important to this project because it helps explain and show our work. What we did to solve the problem was we related it to the things we know about the border patrol and what they do about it. What the country can do to decrease immigration is put more guards on duty at a time.

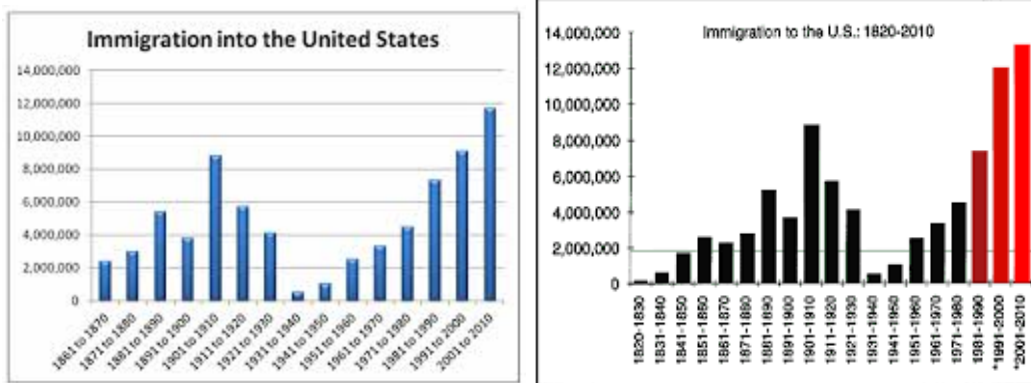

Coding of our Model

Significance

Border patrol has affected the amount of immigrants come to the United States. In 1952 the government have reported over 52,000 immigrants along the Mexican border. The program of border patrol was terminated after a year because it ran out of funds.

Illegal Immigration is not always a positive outcome for our country because when they get in the United States we give them everything to survive. When we could not just have them at all. Illegal immigration is important because if we didn't take care of the problem our schools would be over populated. Which can also interfere with the other kids learning, because more kids means less teaching.

Results

What we did as a team is we all helped each other research, code and our poster board. Our team did lots of teamwork which really helped us get our work done faster than what we usually do.

What we can do better is our coding because we could put so much more variables and details in our coding then we did.

We found that the best thing we did was our teamwork because we all get along great which really helped us. We motivate each other whenever we can. We enjoyed the Supercomputer Challenge and enjoyed being a part of it. We look forward to continue participating in it.
